Jordon de Hoog

Senior Android Developer

jordon.dehoog@gmail.com
(519) 641-9388
London, ON, Canada · **jordond.dev**

Summary

Senior Android developer working in Kotlin and Kotlin Multiplatform, shipping to Android, iOS, and desktop from shared code. Maintainer of several widely used open source Kotlin Multiplatform libraries. Worked directly with Google's Media3 team to bring Transformer into a production video editor. Deep CI/CD and automated testing background. Uses Claude Code and Codex daily, directing agents from plan to merged change.

Experience

Co-founder (Engineering)

Jun 2026 – Present

brewd / Remote / **https://getbrewd.app**

- Co-founded a coffee journal app, live on the App Store and Google Play: Compose Multiplatform client (Android, iOS) over a Cloudflare Workers API (Hono, D1, R2).
- Designed a cross-device sync protocol over a versioned record table, with photos uploaded straight to R2 through presigned URLs, so a journal converges across Android and iOS.
- Self-hosted the map stack: a planet-wide Protomaps basemap range-read from R2 by the Worker, and a cafe index built from OpenStreetMap and Overture Places in D1.
- Generate the Kotlin API client from Zod schemas, with CI failing the build on contract drift.
- Sole engineer across the monorepo: KMP client, edge API, admin dashboard with conditional remote config and rollback, and Astro marketing site.
- Built brewd through a custom plan-to-merge agent pipeline in Claude Code and Codex: one skill turns a request into an evidence-backed plan, another executes it with subagents in isolated git worktrees.
- Gated agent output with Maestro-driven on-device verification and an adversarial multi-agent review that tries to falsify each change before merge.

Senior Software Engineer (Contract)

Mar 2026 – Present

Reading Journey / Remote / **https://readingjourney.co**

- Contributing across the stack on a 3-person team: Cloudflare Workers, TypeScript services, and the SwiftUI iOS client.
- Product grew to 34k registered users and 16k monthly active, $15k total revenue at $1.5k MRR.
- Shipped a request queuing system to absorb a viral traffic spike, throttling outbound calls to a rate-limited third-party API and preventing user-facing failures.
- Designed an aggressive caching layer to cut upstream API load and response times under sustained traffic.
- Leading Android launch by incrementally migrating the iOS Swift codebase to Kotlin Multiplatform, sharing core business logic across platforms while preserving native UI.

Lead Android Developer

Oct 2019 – Feb 2026

1 Second Everyday / Remote

- Lead Android dev for a consumer app serving 250k+ monthly active users; owned architecture, release pipeline, and feature delivery.

- Partnered directly with Google's Media3 team to integrate Transformer into 1SE's video editor: drove API feedback, surfaced edge-case bugs, replaced legacy FFmpeg paths with hardware-accelerated Transformer pipelines.
- Led full migration from Java to Kotlin, enabling adoption of Coroutines, Flow, and Jetpack Compose across the codebase.
- Designed a dual-engine video processing pipeline (FFmpeg + Media3 Transformer) powering in-app video editing.
- Established CI/CD pipeline using GitHub Actions to automate testing, code quality, and releases.
- Architected the app as a multi-module Android codebase on MVVM, Compose, and Coroutines.

Android Developer

Jan 2018 – Oct 2019

EventConnect / London, ON, Canada

- Built EventConnect's Android app from scratch as sole developer: an offline-capable tournament management platform for youth sports events.
- Designed the offline-first architecture and sync layer for tournament venues with weak or no connectivity.
- Owned app architecture, feature delivery, and release pipeline.
- Collaborated with backend and product teams to ship scheduling, team management, and live event operations features.

Software Developer

Jun 2016 – Jan 2018

Cineplex Digital Media / London, ON, Canada

- Developed and maintained digital signage software powering menu boards for national restaurant chains: Tim Hortons, McDonald's, A&W, Chick-fil-A.
- Built tooling that automated asset packaging and cut a manual step out of every deployment.

Projects

WhaleSay / **whalesay.app**

Whimsical human-to-whale translator, live on the App Store and Google Play. Kotlin/Compose Multiplatform client (Android, iOS) over a Cloudflare Workers edge (Hono, TypeScript/Bun). Built a custom whale-audio synth engine that tokenizes text into per-dialect token sequences and renders audio on the fly, with ElevenLabs generation gated behind a subscription. Content-addressed audio cache renders each paid clip once across all users. Solo full-stack monorepo: KMP client, edge API, admin dashboard, and Astro marketing site sharing one design system.

Should I Go Outside? / **shouldigooutside.now**

Open-source multiplatform weather app that recommends outdoor time based on personalized comfort preferences for temperature, wind, and precipitation. Kotlin/Compose Multiplatform on Android, iOS, and Desktop; Ktor backend on Cloudflare Workers.

beedb

Book-metadata backend built to replace a costly third-party API for Reading Journey. Postgres corpus with ISBN/ASIN lookup and typo-tolerant title/author search, fronted by a Cloudflare Workers edge API. Bun/TypeScript services handle ingestion and quota-aware backfill; infrastructure as code with Docker and Terraform. Launching 2026.

Android Build Time: Media & Camera Experiences / **Guest Speaker · YouTube**

Talk on Android media APIs: handling mixed media formats and keeping video editing fast on device.

Toebeans / **toebeans.life**

Fortune-telling app for cats. Custom-trained MediaPipe models for paw detection; Google Gemini generates fortunes. Compose Multiplatform (Android/iOS), Ktor backend, SvelteKit dashboard, Astro marketing site.

Open Source

Material Kolor / **materialkolor.com** ★ 950+

Compose Multiplatform library for generating dynamic Material 3 color schemes from a seed color.

Connectivity / **github.com/jordond/connectivity** ★ 700+

Kotlin Multiplatform networking library providing reactive connectivity monitoring across platforms.

Compass / **github.com/jordond/compass** ★ 460+

Kotlin Multiplatform location toolkit for geocoding and geolocation.

kmpalette / **github.com/jordond/kmpalette** ★ 300+

Compose Multiplatform port of AndroidX Palette that generates a color palette from an image.

drag-select-compose / **github.com/jordond/drag-select-compose** ★ 240+

Compose Multiplatform library for Google Photos style multi-select.

jolt / **getjolt.sh** ★ 550+

Rust-powered terminal battery and energy monitor for macOS and Linux.

dfdu / **dfdu.app**

Rust disk usage browser with a terminal UI (ratatui) and a desktop app (egui) for macOS, Linux, and Windows. Parallel scanner with cached rescans, cleanup rules that rate caches and build output by deletion safety, and remote browsing over ssh.

Skills

Languages	Kotlin · TypeScript · Java
Mobile	Android · Jetpack Compose · Kotlin Multiplatform · Multi-module architecture
Media	Android Media3 / ExoPlayer · Transformer · FFmpeg · MediaPipe
Backend	Cloudflare Workers · Postgres · Docker · Terraform · Bun
Tooling	GitHub Actions · CI/CD · Release automation
AI tooling	Claude Code · Codex · Custom skills and subagents · Maestro

Education

Advanced Diploma in Computer Programming

Fanshawe College · London, ON, Canada 2015
