SUMMARY

Senior Android Developer specializing in Android and Kotlin Multiplatform, with a focus on clean, scalable architecture. Maintainer of several widely used open source Kotlin Multiplatform libraries. Experienced building CI/CD pipelines and automated testing systems that improve reliability and delivery speed. Collaborative problem-solver with a track record of shipping stable, maintainable mobile products.

EXPERIENCE

Lead Android Developer, 1 Second Everyday | October 2019 - February 2026 | Remote

- Lead Android developer for a consumer app serving 250k+ monthly active users; owned architecture, release pipeline, and feature delivery.
- Led full migration from Java to Kotlin, enabling adoption of Coroutines, Flow, and Jetpack Compose across the codebase.
- Designed a dual-engine video processing pipeline (FFMPEG + Media 3 Transformer) powering in-app video editing features.
- Established CI/CD pipeline using GitHub Actions to automate testing, code quality and releases.
- Designed and built architecture for a scalable multi-module Android codebase using MVVM, Compose, and Coroutines to support long-term maintainability and rapid development.

Android Developer, EventConnect | January 2018 - October 2019 | London, ON

- Built EventConnect's Android app from scratch as sole developer, delivering an offline-capable tournament management platform for youth sports events.
- Designed offline-first architecture and sync mechanisms to support real-world usage in low-connectivity environments.
- Owned app architecture, feature delivery, and release pipeline using industry best practices for Android development.
- Collaborated with backend and product teams to ship features supporting scheduling, team management, and live event operations.

Software Developer, Cineplex Digital Media | June 2016 - January 2018 | London, Ontario

- Developed and maintained digital signage software powering menu boards for national restaurant chains including Tim Hortons, McDonald's, A&W and Chick-fil-A.
- Contributed to platform transition from ActionScript to HTML/Javascript architecture.
- Created automation tools to streamline asset packaging, reducing manual effort, and improving deployment reliability

PROJECTS & COMMUNITY

Toebeans | <https://toebeans.life>

- A fortune telling app for cats, uses custom-trained ML models with MediaPipe for toebean (paw) detection, and Google Gemini to generate the fortunes.
- Built with Kotlin and Compose Multiplatform for Android and iOS, with a Ktor backend, SvelteKit dashboard, and Astro marketing site.

Should I Go Outside? | <https://shouldigooutside.now>

- An open-source multiplatform weather app that tells you whether to go outside based on your personalized comfort preferences for temperature, wind, and precipitation.
- Built with Kotlin and Compose Multiplatform targeting Android, iOS, and Desktop, powered by a Ktor backend deployable to Cloudflare Workers.

Android Build Time - Media & Camera Experiences | Guest Speaker

- Featured speaker discussing Android Media APIs, handling diverse media formats, and performance strategies for efficient media editing.
- www.youtube.com/watch?v=nWXmrY8J_nY

Material Kolor | <https://materialkolor.com> | 800+ stars

- Compose Multiplatform library for generating dynamic Material 3 color schemes from a seed color.

Connectivity | <https://github.com/jordond/connectivity> | 650+ stars

- Kotlin Multiplatform networking library providing reactive connectivity monitoring across platforms.

Compass | <https://github.com/jordond/compass> | 350+ stars

- Kotlin Multiplatform location toolkit for geocoding and geolocation.

kmpalette | <https://github.com/jordond/kmpalette> | 270+ stars

- Compose Multiplatform port for AndroidX Palette, generates a color palette from an image.

drag-select-compose | <https://github.com/jordond/drag-select-compose> | 240+ stars

- Compose Multiplatform library for Google Photo's style multi-select.

jolt | <https://getjolt.sh> | 200+ stars

- A Rust-powered terminal-based battery and energy monitor for macOS and Linux.

SKILLS

- Android development
- Open source maintainer
- Release automation
- Kotlin and Compose Multiplatform
- TypeScript and JavaScript
- In-app billing

EDUCATION

Diploma in Computer Programming

Fanshawe College, London ON Canada | 2015
